

## GNU Compilers Build Versions History

-----  
(this version: 14.5.97)  
(contact gil@snsys.com to report problems)

2.7.2.SN32.3.7.0002      14.5.97

First of the new regular fortnightly builds

Fixes:

- 8. N64.H : N64 build should not insert call to \_\_main if main() defined
- 9. UNROLL.C : parameterise max. number of insns allowed in an unrolled loop

2.7.2.SN32.3.7.0001      10.2.97

First build with a build number - first application of test suite

Fixes:

- 1. MIPS.C : temporary files not correctly deleted
- 2. CCCP.C : preprocessor should output makefile rules with object files suffixed with .OBJ rather than .O
- 3. MIPS.C : temporary files should be created in the directory TMPDIR
- 4. CCCP.C : #include can't specify a drive letter
- 5. CCCP.C : #include can't use either a forward or back slash in paths
- 6. SDBOUT.C : should use 6 dimensions for array debug output, not 4

## Pre-'build' versions

-----  
2.7.2.SN32.3.7 (10.2.97)

Unified source trees and version numbers for all 32-bit builds.

2.7.2.SN32.3.4 (13.1.97)

Changed SDB\_MAX\_DIM to 6 in SDBOUT.C to fix 5/6-d array debug output.

2.7.2.SN32.3.3 (28.11.96)

Rebuilt with MIPS fix for deleting temporary files used in GP optimisation (add -D\_\_MSDOS\_\_ to CFLAGS).

2.7.2.SN32.3.2 (?)

First working version
